Group Members: Dalton Graber, Jack Ventura, Tyler Yocom

Project Title: Movie Ticker Ordering System

Project Webpage: <https://github.com/dgraber00/System-Implementation?tab=readme-ov-file#system-implementation>

Product Features:

Users will be able to see available movie times for a selected date and theater location.

Users will be able to select a desired showtime and seat for a movie.

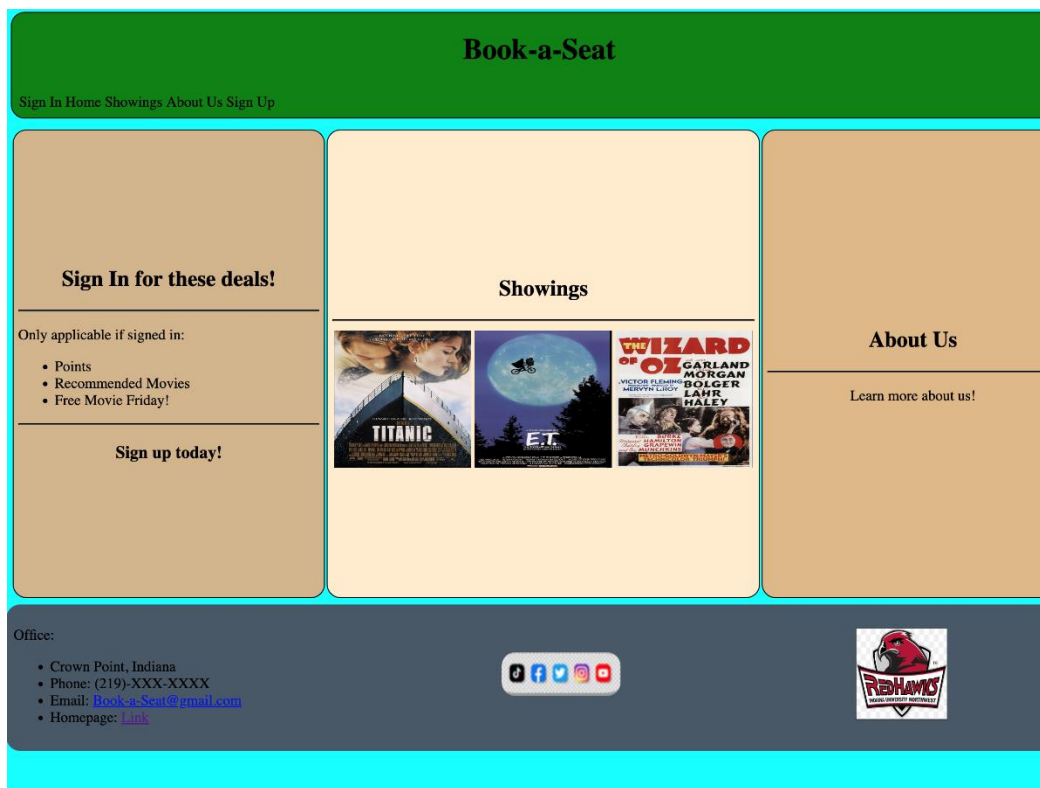

Users can add tickets to cart and securely checkout online.

Users will receive an electronic ticket after purchase.

Users will be able to order food, drinks, and snacks online before the start of the movie and pick up at the food counter when they arrive to the theater.

Users will have the option to receive notifications about upcoming movies.

GUI: The first image shows the initial page users will see when accessing the page. The second image shows the available moves and has a genre option so users can select movies in a specific genre.
